

## Orange Juicer Machine Operation Steps

Place the machine on the table after it is taken out of the box;

Make sure that no parts is missing on the box.

Connect power plug to a power/socket, and turn on the power switch, run the machine without load.

This is to check that machine run normally and does not make any strange noise.

Then, check whether the waste bins and tray are place in the correct positions, Then turn off the machine.

Put the cup on the tray to get juice.

Put pre-washed oranges into the top basket before squeezing.

Turn on the switch, and let the machine run without load for a while. Then put oranges into feed rail, and oranges will roll into concave roller, and cut into two half by knife assembly, and squeezed by convex-roller.

Juice flowing down the cup.

To stop squeezing, turn off the power switch.
